MEMORANDUM FOR : Deputy for Technology, Office of Special Activities

SUBJECT : North American Inertial Navigator

1. I understand that the Autonetics Division of North America has developed and is ready to market a new light-weight inertial navigation system, which is said to be applicable to missiles and manned aircraft, especially lighter weight configurations. It is said that North American plans to put this on display at the forthcoming Paris Air Show next month.

2. In connection with the activities of [ ] with regard to the covert satellite project, I think it would be appropriate to see if such a system might not bear active consideration. Would you look into this and let me know if it appears profitable.
